

Guiding Principles

- Define protections that enable trust in the cloud.
- Develop cross-platform capabilities and patterns for proprietary and open-source providers.
- Will facilitate trusted and efficient access, administration and resiliency to the customer/consumer.
- Provide direction to secure information that is protected by regulations.
- The Architecture must facilitate proper and efficient identification, authentication, authorization, administration and auditability.
- Centralize security policy, maintenance operation and oversight functions.
- Access to information must be secure yet still easy to obtain.
- Delegate or Federate access control where appropriate.
- Must be easy to adopt and consume, supporting the design of security patterns
- The Architecture must be elastic, flexible and resilient supporting multi-tenant, multi-landlord platforms
- The architecture must address and support multiple levels of protection, including network, operating system, and application security needs.

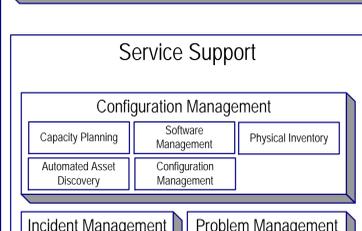

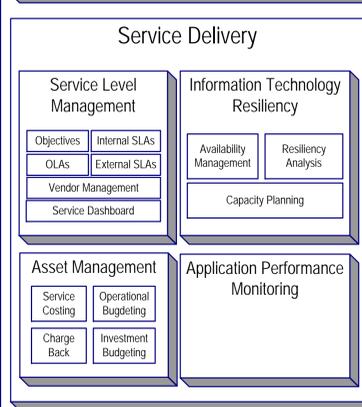

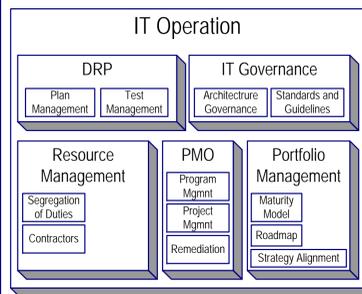

High Level Use Cases

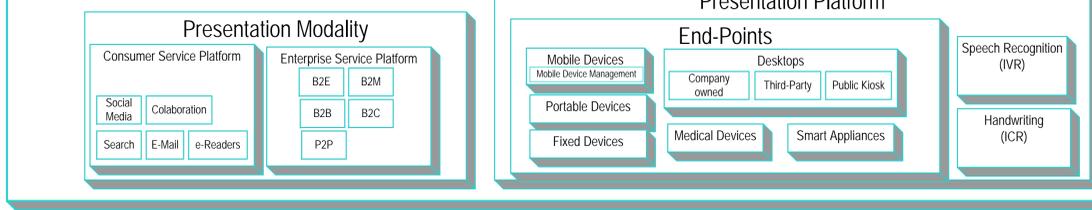

Business Operation Support Services (BOSS)

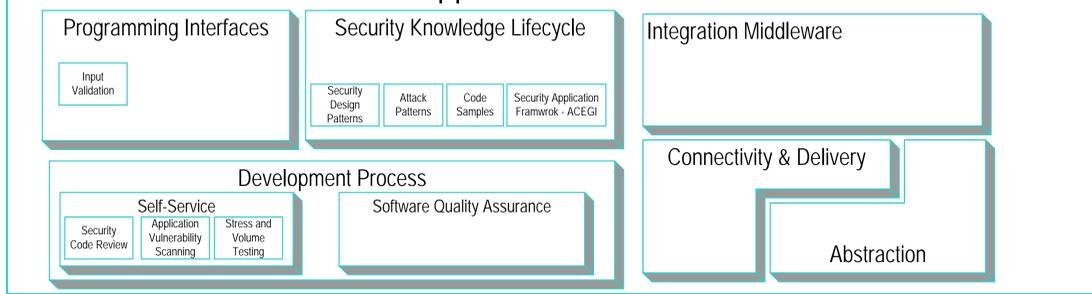

Information Technology Operation & Support (ITOS)

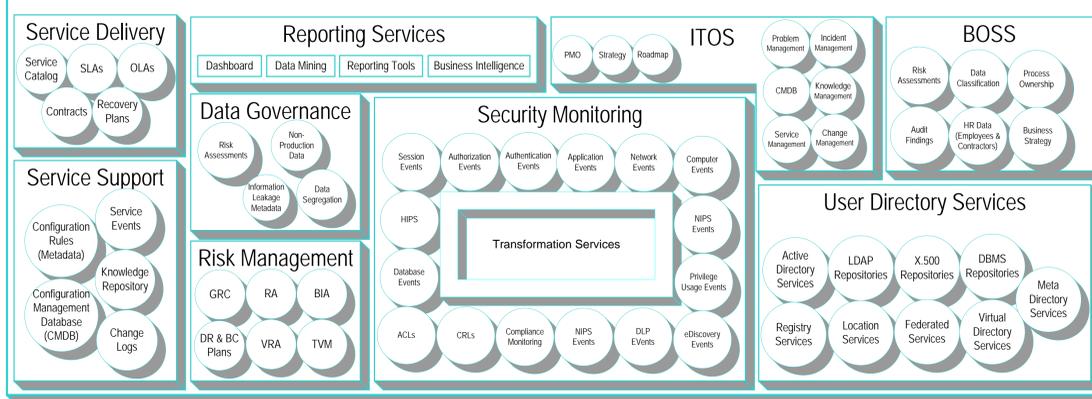

Presentation Services

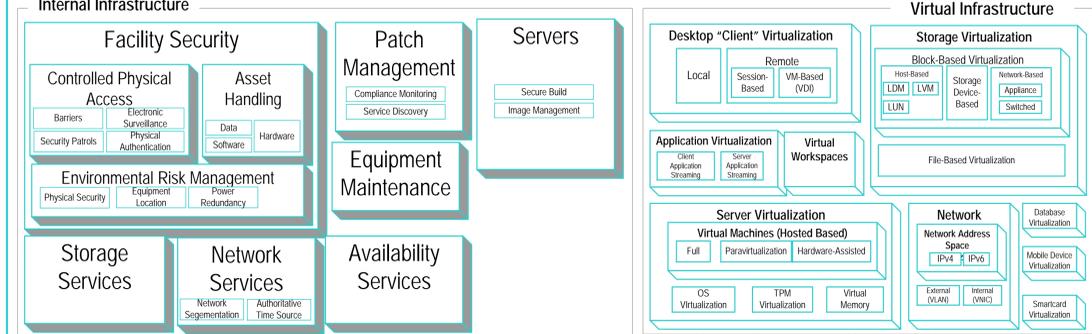

Application Services

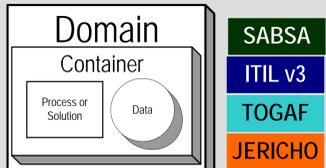

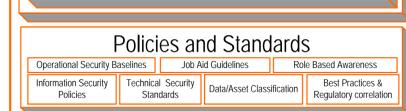

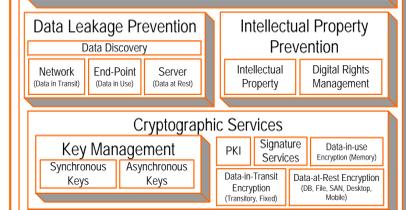

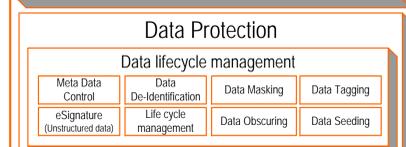

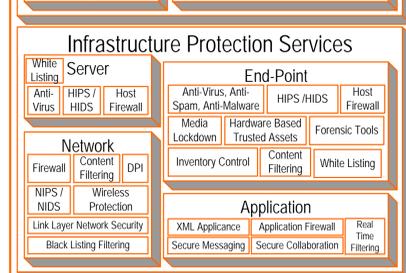

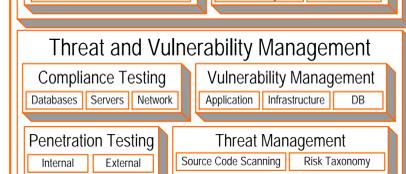

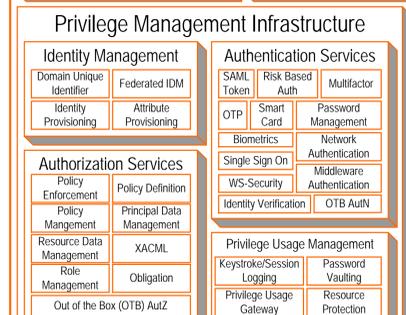

Information Services

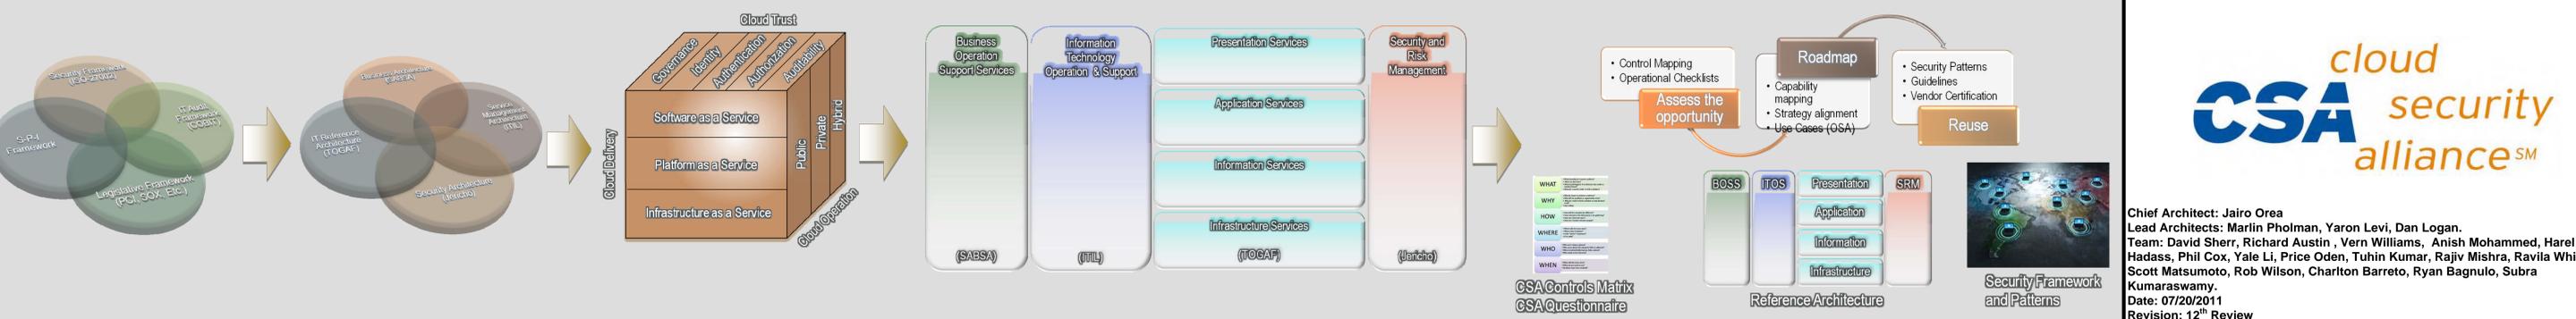

Infrastructure Services

Security and Risk Management

- SABSA
- ITIL v3
- TOGAF
- JERICO
